

BELİZ YAZICI

Software Engineer

Izmir, Turkey | belizyazici09@gmail.com | <https://www.linkedin.com/in/belizyazici> | <https://github.com/belizyazici> | <https://belizyazici.github.io>

SUMMARY

Software engineer with hands-on experience in **scalable ETL processes**, **relational modeling (PostgreSQL and MySQL)**, and **cloud fundamentals (AWS)**. Specializing in the development of efficient data pipelines and optimizing database performance. Committed to architecting high-availability data solutions and continuously improving technical skills.

WORK EXPERIENCE

EPAM Systems - Data Analytics Engineering Trainee | *Global (Remote)* **2025/10 - Present**

- Architected scalable ETL processes and operationalized data ingestion pipelines, achieving an 80% improvement in loading efficiency.
- Constructed Star Schema models in **AWS Redshift**, slashing query latency by 90% via strategic distribution styles.
- Utilized **AWS S3** for raw data storage and **AWS Athena** for serverless querying, ensuring a cost-effective and high-performance data lake architecture.
- Authored PL/pgSQL functions in PostgreSQL and automate complex data cleansing and transformation processes, across 2 sources in the data warehouse.
- Created detailed logical and physical data models using Draw.io, facilitating clear entity relationships and ensuring 3NF normalization standards.
- Delivered technical requirements and completed rigorous peer code reviews in an international **Agile** environment.
- Completed projects by undergoing regular peer code review processes in an international, English-speaking Agile environment, under the supervision of foreign mentors.

Orris Academy - Software Developer | *Turkey (Freelance)* **2024/05 - 2025/01**

- Developed and integrated custom APIs to stream live engagement data (likes, gifts, emojis) from TikTok into game engines.
- Orchestrated real-time data processing for three game projects, enabling interactive gameplay based on viewer reactions during high-traffic live events with 5,000+ concurrent users.
- Facilitated the company's first revenue stream by launching two data-driven interactive games and developing a responsive corporate platform.

EDUCATION

BSc Software Engineering **2021 - 2025**
Izmir University of Economics *Izmir, Turkey*

PROJECTS

End-to-End Omnichannel Retail Data Warehousing & Analytics | *EPAM Systems Training Project* **2025/01 - 2026/05**

- Established a scalable data lake on **AWS S3** to store processed retail datasets, utilizing **AWS Athena** for serverless ad-hoc querying and schema-on-read analysis.
- Streamlined ETL processes by leveraging **PostgreSQL stored routines**; improved data loading efficiency by 80% while ensuring data integrity and cleansing across diverse datasets.
- Accelerated **Redshift** cluster performance by implementing strategic Distribution Styles and Sort Keys, resulting in a 90% reduction in query execution time.
- Built an advanced **Power BI** dashboard with complex **DAX** measures (Time Intelligence, Ranking) to provide actionable insights into retail sales performance.

Data Analysis of Job Loss Due To AI | *MATH 485 Term Project* **2025/05 - 2025/06**

- Conducted a comprehensive study on the disruptive impact of AI on job loss by performing data preprocessing on multi-sector datasets in **RStudio**, processing multi-dimensional data to ensure structural consistency for analysis.
- Applied non-parametric methods, including **Spearman's Rank Correlation** and **Chi-Square tests**, to examine dependencies between AI adoption rates and industry-specific job displacement, identifying hidden patterns across diverse sectors.
- Visualized correlation matrices and trends in **R** to conclude that while AI poses a threat to routine-heavy roles, it acts as a catalyst for new skill-sets, providing a quantitative basis for predicting future workforce transitions.

- Vision-Guided Autonomous Restaurant Robot | *Graduation Project*

2025/02 - 2025/06

 - Executed an end-to-end computer vision pipeline by training a **YOLOv8** model on curated datasets and deploying it on **Raspberry Pi 4**, optimizing SDK environments and hardware-software communication to achieve low-latency, real-time autonomous navigation.
- Sentiment-Driven Personalized Advertising System | *Lenovo AI Marathon Project*

2025/04 - 2025/05

 - Developed an AI-based generative pipeline to generate personalized, real-time advertisement content, leveraging **Transformers** and **DeepFace** for real-time image and text personalization.
 - Successfully built and presented a functional prototype during the Lenovo AI Marathon, demonstrating high-speed development and deployment of complex AI models.
- Predictive Modeling with Ensemble Learning on Process Data | *CE 475 Term Project*

2025/04 - 2025/05

 - Constructed an ensemble learning regression model using Python (XGBoost, LightGBM, CatBoost, Random Forest) with outlier removal, feature engineering, and data augmentation. Achieved high accuracy and exported predictions to Excel for final reporting.
- AI-Powered Educational Support and Learning Platform | *BTK Akademi Hackathon 2024 Project*

2024/10 - 2024/11

 - Devised a seamless data pipeline using **YouTube Data API** to ingest educational metadata and integrated **Gemini AI** to develop a conversational chatbot, completing the full-stack development and prompt optimization within a high-pressure 7-day hackathon sprint.

CERTIFICATIONS

- Data Analytics Engineering | EPAM Systems

Power BI: Integrating AI | LinkedIn

Project Management | Google

Python Bootcamp | Global AI Hub

Basic Occupational Health and Safety | IUE
- Data Analysis Bootcamp | Global AI Hub

AWS Essential Training for Developers | LinkedIn

IELTS Academic English Certificate | IELTS

AI Fundamentals with IBM SkillsBuild | Cisco

SKILLS

- Programming Languages:** Python, SQL (PostgreSQL, MySQL), R, Java
- Databases & Warehousing:** PostgreSQL, MySQL, Amazon Redshift, Amazon DynamoDB
- Cloud Services (AWS):** Amazon S3, Amazon Athena, Amazon RDS, Amazon EC2, AWS Lambda
- Data Tools & Frameworks:** Pandas, NumPy, Scikit-Learn, Matplotlib, Power BI (DAX), DBeaver, Git, Jupyter Notebook, PySpark
- Methodologies:** ETL Pipeline Design, Relational Modeling (Star/Snowflake), Agile/Scrum

VOLUNTEERING EXPERIENCE

- Izmir University of Economics - Student Mentor | *Izmir, Turkey (On-Site)*

2023/08 - 2024/02

 - Coordinated a comprehensive orientation program tailored to first-year students, incorporating academic advising and social engagement, which resulted in a 25% reduction in first-year anxiety and an increase in motivation during the critical adaptation period.

LANGUAGES

- Turkish - Native
